

Hi Families- It is really important to remember that as we have been apart for over two months, the immunity we have developed to things other than COVID-19 may be decreased. Increasing our immune system will help with all viruses. We increase our immunity through eating healthy fruits and vegetables, drinking water, exercise, sunshine, taking off socks and shoes and walking in the grass, and sleep.

The State is recommending that we serve 100% Orange Juice at one of our snacks to help with some vitamin C intake, but other great fresh fruits and vegetables in lunches and snacks to help boost your child's immunity will absolutely help. This juice offering will be in our 2's and up. :) Thank you!

For our returning families: Please bring in a water bottle for your child labeled with their name. Our drinking fountains will not be able to be used at this time.

Also, please put all of your child's items in one bag. We will have runners taking your child to their classroom, and we will put everything where it goes.

The gloves that we are able to obtain contain latex. If your child has a latex allergy/sensitivity, please let us know. We will switch back as soon as we are able to, but must use these in the meantime.

Please remember your sheet that is available on our website.

See you soon!
